

# At-A-Glance

## WHO WE ARE

Founded in 1862, ABS is a global leader in providing classification services for marine and offshore assets. Our mission is to serve the public interest as well as the needs of our members and clients by promoting the security of life and property and preserving the natural environment. ABS' commitment to safety, reliability and efficiency is ever-present. ABS continues to lead in industry safety metrics - including a record three-year achievement for zero lost time work-related incidents for 2017 - 2019.

## WHAT WE DO

### TRUSTED ADVISOR

Today, ABS is working in a rapidly changing business environment where global markets are shaped more frequently by digital technology and data analytics. We are applying advanced technology, digital tools, capabilities and improved core processes to drive safety excellence, greater performance and efficiency - generating greater value for our members and clients. ABS continues to be a trusted advisor and partner, supporting marine and offshore business ventures for both traditional and non-traditional clients.

### AGILE, BETTER, STRONGER

Moving quickly and easily, ABS provides solutions that add greater value to our clients, making us stronger every day.

- Surveys during construction, after construction
- Compliance audits
- Development of standards known as Rules
- Engineering research and development
- Technical plan reviews and design analysis
- ABS CyberSafety™ Program
- Asset Reactivation
- Remote Survey and Audits
- Sustainability and Compliance Services
- Digital Solutions

# 3 STEPS TO A DECARBONIZATION STRATEGY

PATHWAYS TO REDUCE  
YOUR CARBON INTENSITY

# INTRODUCTION

The IMO has set new limits on the sulfur content in marine fuels and ambitious mid-term targets to reduce the CO<sub>2</sub> and greenhouse gas emissions from global shipping. Owners are now faced with the difficult task of decarbonizing their fleets.

With so many fuel and technology options available and certain to emerge in the next few years – the viability of many uncertain – devising a sustainable fleet-wide decarbonization strategy that meets your company's needs is complex.

Underpinning whatever decarbonization solutions you select needs to be a robust safety regime that fully addresses the risks that could arise from introducing new technology, fuels and operational strategies.

The carbon footprints of each fleet will be different, and each ship within those fleets will require a bespoke strategy to navigate the most effective path to meeting the new regulations and emissions targets. For some owners, the task ahead will be daunting.

ABS, a trusted technical advisor to some of the world's largest shipowners, has the knowledge, tools and clear processes to help you define and achieve sustainable operations as you enter the new low-carbon era of international shipping. So, how do you get started?

## INDUSTRY OUTLOOK

For more information on the options available to achieve your decarbonization goals, check out these publications from ABS.

**Setting the Course to Low Carbon Shipping - 2030 Outlook, 2050 Vision (2019)**

**Setting the Course to Low Carbon Shipping - Pathways to Sustainable Shipping (2020)**

# 01 DEVELOP YOUR CARBON FOOTPRINT AND CARBON INTENSITY PROFILE

Management systems practitioners will tell you that you cannot manage what you do not measure, so the first step is to develop a carbon footprint and carbon intensity profile.

Benchmarking the performance of each vessel in your current fleet provides the starting points against which improvements and progress towards future fuel efficiency and decarbonization goals can be measured.

Part of the process requires decoding data from the different assets to create a common language for individual vessel performance measurements and assessing how they compare across common metrics. This data will help target resources to assets where they are most needed, or assess whether investments are worthwhile.

A critical aspect of developing your profile is also looking ahead and identifying your goals. The idea is to start at the end. Establish where you need or want to be – a clear picture of what success will look like – and let the emissions and fuel performance data mark the path to progress. Starting at the baseline, there should be clear objectives for near-, mid- and long-term fleet performance.

**92%** of goals fail because they are not clearly defined and broken down into achievable micro goals – therefore, this step is critical.

## THINK HOLISTICALLY

In setting your goals, ask what your emissions-compliant fleet will need to look like – for both existing and new ships – rather than what designs compliant newbuilds will or may have.

Next, define your goals in the context of the regulatory framework.

Finally, align your objectives with external business drivers, such as the demands of regulators, financiers and charterers. This will lead to the adoption of your decarbonization trajectory.

## 02 CONSIDER YOUR OPTIONS

In the next few years, a raft of new technologies – including those that support low and zero carbon fuels – are expected to mature and become available.

The safety implications of these options will need to be fully understood and accounted for, and the value of each option will need to be assessed against the decarbonization goals of each asset and the wider fleet, including any anticipated ship orders.

While measures aimed at improving operational efficiency will be applied to each ship, the gains should also be measured in the context of the fleet. Data and digital solutions have the potential to optimize everything from fuel consumption and asset reliability to routing, scheduling and port stays.

Leveraging new operational strategies or advancements in ship technologies to lower carbon footprints should be measured against the performance of each individual vessel. Questions remain about whether most low-carbon new energy sources can deliver the base load power required for international shipping. Additionally, it is not currently assured that an adequate supply of any new fuels – let alone the supply chain infrastructure to deliver them – will be available.

For these reasons, you should plan to take five or more years for any decarbonization goals to be met from related initiatives. When these technologies mature enough for strategies to be formed and applied, any gains should be measured against individual vessels, both existing and new.

At this step it is also important to consider the risks and lifecycle implications of new technologies or new fuels. As your strategy is realized, front end studies are important to mitigate potential risks. In most cases, external guidance will be available to help you effectively execute your goals.

# 03 IMPLEMENT YOUR STRATEGY

The final step is to implement your strategy. Shifting to low-carbon shipping will require changes to some aspects of how your business is delivered. Your goals will need to be clearly communicated to shoreside staff and crew onboard, and any changes will need to be managed across all affected departments, operations and procurement activities, including research and development.

In most cases, external guidance and best practices will be available to help you effectively implement new technologies and operational changes, so it will most likely not be necessary to start from scratch.

Measuring your progress is critical, so make sure you ground your measurements in quality data.

During the implementation of your strategy monitor the alignment with your selected trajectory by putting in place the proper environmental monitoring system that will help you quickly identify potential deviations and provide decision support for corrective actions. This will also provide a structured platform for dependable sustainability reporting.

## ABS SUSTAINABILITY CENTERS

### Need assistance developing your decarbonization strategy?

ABS is ready to assist you. Send us an email at [sustainability@eagle.org](mailto:sustainability@eagle.org) or visit us at [eagle.org/sustainability](http://eagle.org/sustainability).

## PRACTICAL GUIDANCE

For more information on the fuel options available to achieve your decarbonization goals, check out these publications from ABS.

### Gas and Other Low Flashpoint Fuels Advisory (2019)

### Sustainability Whitepaper: LNG as Marine Fuel (2020)

# CONCLUSION

Learn the lessons the transition has offered to help ensure a cycle of continuous process improvement; know the impact of decarbonization on all aspects of your business and utilize progress and problems to drive continuous improvement.

The technology solutions that support the decarbonization of international shipping will continue to advance over time; so should your safety strategy and your business' ability to adopt any changes with the least possible disruption.

## ABOUT THE AUTHOR

Georgios Plevrakis serves as ABS Global Sustainability Director, driving the ABS sustainability strategy and assisting owners and operators with achieving their sustainability goals.

Prior to joining ABS, Plevrakis worked in a number of roles spanning power generation manufacturing to classification services. Previous roles include serving as Business Development Manager for RINA and Head of Power Plants and Turbomachinery and Marine New Buildings Manager for MAN Diesel & Turbo covering Greece, Cyprus and the Balkan Region.

Plevrakis holds an MEng in Mechanical Engineering from the National Technical University of Athens and an MBA from the Athens University of Economics and Business.

# MY DIGITAL FLEET™

## CONNECT YOUR DATA. REDUCE YOUR RISKS.

The ABS My Digital Fleet™ is the only customizable risk management platform that provides real-time data-driven insights to improve fleet efficiency, reduce costs and manage risks.

By integrating Class and Operational data along with Structural, Machinery, and Environmental analytics, the My Digital Fleet platform offers risk-based insights, real-time alerts and decision support to manage everyday operational challenges and desired business outcomes.

### MY DIGITAL FLEET™ AND ABS DIGITAL SOLUTIONS

The ABS My Digital Fleet is the only customizable risk management platform for marine and offshore clients to view their asset's operational health and risk profile in real time. Make data-driven decisions and reduce your risks by tackling your compliance, sustainability, and asset management challenges, all powered by the suite of ABS Digital Solutions.

## THIRD-PARTY INTEGRATIONS

ABS My Digital Fleet supports risk and predictive compliance intelligence using Class, ERP Solutions, ABS Digital Solutions, and ABS Nautical Systems, as well as third-party data sources.

Vessel positions data including live positions and historical movements.

Location-based insights regarding current and emerging cybersecurity and maritime security risks.

Location-based insights regarding environmental operations and whether it is allowed as per local or international standards.

## MY DIGITAL FLEET™ KEY FEATURES AND INSIGHTS

### PLATFORM FEATURES

- Web Access to Cloud-based Operations Dashboard
- Live Fleet Map with Vessel Positions powered in part by Lloyds' List Intelligence
- Vessel-Specific Operational Risk Models tailored to Client Business Drivers
- Risk Alerts via Email Notifications
- Integration with ABS Digital Products and Client Systems
- Client-Specific KPIs and Benchmarking
- Integrated Custom Dashboards

### COMPLIANCE AND RISK INSIGHTS

- Port State Control (PSC) Risk
- Security Risks across different maritime areas and destination ports powered by Control Risks CORE+ Maritime
- Cybersecurity Risks powered by Control Risks CORE+ Cyber

### SUSTAINABILITY INSIGHTS

- Environmental Operation Risk powered by EMH Systems
- Global Environmental Regulations Database powered by EMH Systems
- GHG Monitoring

### MACHINERY INSIGHTS

- Maintenance Health Risk with CMMS Integration
- Machinery Anomaly Risk with connected ABS Machinery Performance Monitor

### STRUCTURAL INSIGHTS

- Extreme Event Risk with connected ABS Structural Dashboard
- High Fatigue Life Consumption Risk with connected ABS Structural Dashboard
